

## Pawport Smart Pet Door Returns to CES with Upgraded Complete Two-Door System and New Accessories

**LAS VEGAS - (Jan. 6, 2025)** - [Pawport](#), a Phoenix-based consumer tech startup, announces its new and improved Pawport Smart Pet Door with upgraded features and accessories at CES 2025. Pawport is a patented, smart, secure pet door that mounts onto existing pet doors in seconds, instantly converting old fashioned and vulnerable pet doors into high-security doors that can be controlled via an app and integrated into a smart home.

Building on its design debut at CES 2024, Pawport has changed the pet door game again with its companion exterior door that works in tandem with the smart inside door to provide the ultimate in pet door style, security, weatherproofing, and function. The Pawport Smart Pet Door system is constructed of thick, powder-coated steel and aluminum, with two solid deadbolts for years of problem-free use. The two doors together represent the highest level of security available for a pet door system, with integrated tamper alarms and in-sync performance that sets a new standard for pet door automation. With three series – Standard, Designer, and Signature – Pawport provides pricing and aesthetic options to fit any pet owner and deliver a truly modern, stylish appearance.

### **How Pawport Works**

The Pawport Smart Pet Door connects to a lightweight, waterproof smart collar tag that enables the door to automatically open when the pet is near and in motion, ensuring that only the

appropriate pet can enter or exit the home. The system pairs with the Pawport app, enabling remote control and management, curfew and scheduling capabilities, voice control via Alexa, Siri, or Google, pet-specific tracking and usage data, and more, creating a functional and safe solution for pets and their families. With three sizes available, Pawport accommodates pets of virtually any height and weight.

### **New Two-Door System for Ultimate Security**

While the Pawport Smart Pet Door can be easily mounted indoors over any existing pet door, for new or remodel installations, the weatherproof Outdoor Pet Door and Tunnel System is designed to be professionally installed in tandem with the Smart Pet Door, for a two-door system that works in sync and provides even greater protection from intruders, pests, and thermal leaks. The system is constructed of high-grade steel and aircraft-grade aluminum and finished with a durable powder coat finish that will stand up to harsh conditions and climates.

### **Collections to Seamlessly Fit Any Home**

Unlike traditional, unsightly pet doors that can become an eyesore in many home interiors, Pawport offers 13 sleek finishes across three collections that can enhance any decor.

The Standard Series is the most affordable option, constructed of steel with strong composite plastic doors and finished with a durable paint and top coat. Both the Designer and Signature Series take security to the max, made of steel with heavy duty, aircraft-grade aluminum doors. The Designer Series is beautifully finished in premium scratch resistant materials, coming in neutrals as well as tasteful color options. For an elevated aesthetic, the Signature Series offers a subtle textured facade that mimics natural wood grain in a range of tones to match any home.

### **Additional Features:**

- **Pet Curfew and Weather Detection Settings:** Through Pawport's app, users can customize their pet's schedules to make sure they are kept inside at night and during unfavorable weather, including when rain and/or lightning is detected.
- **Pet Tracking Insights:** Users are able to monitor their pet's activity with notifications that track when their pets go inside and outside and can access data insights in the app such as the total number of times outside, duration of each outside session, general pet activity and resting time, and other pet usage information and metrics.
- **Safety and Peace of Mind:** The Pawport Smart Pet Door is equipped with delicate sensitivity gauges that prevent the doors from closing on a pet as they enter or exit a home. In addition, while users can control Pawport remotely via the app, they also have the option to disable the top panel controls to prevent a toddler from using the controls on the top of the device to open Pawport and crawl through. With the optional rechargeable battery pack installed, Pawport will remain usable even when the power goes out, ensuring peace of mind that no pet will be stuck inside or outside, or forced to rely on WiFi or AC power to use the door.
- **Multiple Power Options:** Pawport can be powered with an optional rechargeable battery pack that is concealed inside the door or can simply be plugged into AC power

using the USB-C plug on the bottom, or the power cord may be hidden inside the wall using the optional Pawport hard-wire kit. An optional Pawport Solar Panel can be connected to the system to extend battery life.

- **LED Light Customization:** The Pawport app allows homeowners to directly control the color and brightness of the built-in LED lights on their indoor Pawport Smart Pet Door and allows them to schedule the light on/off times to match their preferences. Users can choose from millions of colors and brightness options to further match the Smart Pet Door to their personal taste.

### **Accessories and Other Products**

At CES 2025, Pawport will also be showcasing several new accessories to complement the Pawport door, including an array of premium collars that match the doors and Smart Pet Tags, the PawMat, a premium turf mat to keep paws clean on the way in, an adjustable outdoor ramp, and much more.

Pawport and its accessories will be available in early 2025 with Smart Pet Door prices starting at \$499. To learn more about Pawport, visit [pawport.com](https://pawport.com).
